Resumen de comandos y opciones Angular CLI

<https://cli.angular.io/>

The image shows the official Angular CLI website. At the top, there's a navigation bar with links for 'DOCUMENTATION', 'GITHUB', 'RELEASES', and 'GET STARTED'. Below the navigation, there's a large orange section featuring a screenshot of a Mac OS X terminal window. The terminal shows the following command sequence:

```
> npm install -g @angular/cli  
> ng new my-dream-app  
> cd my-dream-app  
> ng serve
```

 To the right of the terminal screenshot, the text 'Angular CLI' is displayed in large white font, followed by the subtitle 'A command line interface for Angular' and a 'GET STARTED' button.

Resumen de comandos y opciones Angular CLI
